

COMMONWEALTH OF PENNSYLVANIA

TENTH  
ANNUAL STATISTICAL  
REPORT

*of the*

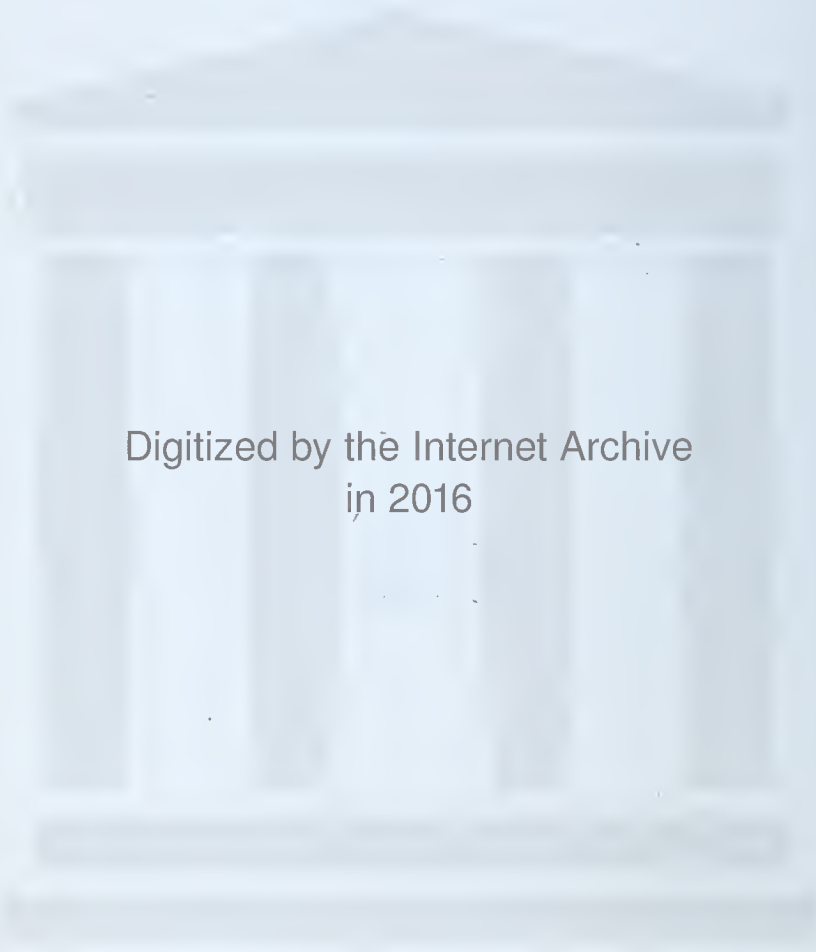

Department of Welfare

S. M. R. O'HARA

*Secretary*

1944

Digitized by the Internet Archive  
in 2016

The statistics presented in this and preceding issues of statistical tables of the Department of Welfare have furnished valuable information in analyzing the problem of governmental care of the mentally ill, mentally deficient and the epileptic.

On April 5, 1944, Honorable Edward Martin, Governor of Pennsylvania, appointed a Committee to make a complete study of the hospitals for the mentally ill and criminally insane of the Commonwealth. Members of the Committee were:

Dr. Howard K. Petry, Superintendent, Harrisburg State Hospital, Chairman  
Dr. Charles A. Zeller, Superintendent, Philadelphia State Hospital  
Dr. Grosvenor B. Pearson, Director, Western State Psychiatric Hospital  
Major General Charles R. Reynolds, Dept. of Health, Former Surgeon General, U.S.A.  
Dr. William C. Sandy, Director, Bureau of Mental Health, Department of Welfare.

Within the scope of its assignment was the study of possible elimination, consolidation and expansion of existing institutions and the designation of certain institutions for special work.

As the result of the work of this Committee, the Department of Welfare presented to the Post War Planning Commission a ten year program for construction of hospitals for the mentally ill, schools and institutions for the mentally deficient, and the colony for epileptics.

The present session of the General Assembly has appropriated \$19,985,000 for the execution of the program in coordination with a similar program for the penal and correctional system of the Commonwealth.

Pennsylvania will long be indebted to Governor Martin for his efficient, constructive and intelligent leadership in planning to provide humane service for the people of our Commonwealth in a modern system of institutions.

The Bureau of Mental Health is ready to parallel the program of construction with a program of prevention services in the psychiatric field. This

will include the activation of the closed Mental Health Clinics as the war demands lessen, and the needed professional men and women are released.

The Department proposes a ten year construction program, but recommends a twenty year program with periodic revision in each fifth year for the incorporation of new experiences and methods and to fix further objectives in the field of prevention, treatment, cure and care or training of the mentally ill, mentally deficient and the epileptic.

Department of Welfare

S.M.R. O'Hara

Secretary

May 3, 1945

The tables and statistical information included in this Tenth Annual Statistical Report, Section A, are comparable to those issued in previous copies. The data collected and compiled by the Division of Research and Statistics is used for two purposes.

The first purpose is for administrative analysis and planning. Numerous individual reports are issued on a monthly basis to facilitate the efficient management of the Department of Welfare.

The second major use of the statistics is to keep an historical record of comparable facts, so that at any time conditions can be ascertained and trends can be noted.

Three separate sections of the statistical report are issued each year. Section A deals with Mental Hospitals, Section B with Penal Institutions, Section C with Fiscal, Institutional Management and problems involving community activities.

Acknowledgement is made to the services of Mrs. Gertrude Thompson and members of the staff of the Division of Research and Statistics for their efforts in collecting, analyzing and producing this report.

\* This hospital receives no direct commitments. Its objectives are these:

- (1) Research - the intensive study and vigorous treatment of selected cases, drawn from the whole Commonwealth.
- (2) Education - the training of medical students, post graduates, physicians on the staffs of the State institutions and other personnel such as nurses and social workers.
- (3) Observation - and examination of selected cases, offering difficult and unusual problems such as have educational value and which require intensive research.
- (4) An extensive out-patient department through which a considerable amount of local institutionalization may be avoided. This Clinic also acts as a model and is used for the purpose of improving out-patient Clinics in other parts of the State.

\*\* No capacity or percentage of occupancy figures listed due to the type and nature of the institution. Population figures are carried so that the totals will balance with other totals listed in this bulletin.

## BUREAU OF MENTAL HEALTH

Since 1939 the statistical compilations in regard to mental patients in Pennsylvania have appeared as the first section of the Annual Statistical Report of the Department of Welfare and, as a separate publication, comprehensive returns made to the Bureau of Mental Health from all the State owned and State aided mental institutions of the Commonwealth.

This, the tenth of the total series, records selected data for the fiscal year ending May 31, 1944. Eighteen institutions for the mentally ill, 3 for mental defectives, and one for epileptics are represented together with a State aided facility in each of the first two categories. Among those for the mentally ill, the County mental hospital of Blakely appears for the last time, as it was closed January 13, 1944, whereas the County institution at Ransom which is State supported, still remains. The Western State Psychiatric Hospital derives its patients by selected transfers from other hospitals because of its special function as a research and educational component of the Commonwealth's mental health system.

These statistics do not by any means cover all the possibilities of portraying the wealth of data available. The given tables are standard selections for comparable review with similar activities in other States and for whatever conclusions that may justifiably be drawn in the light of our previous annual reports.

Such conclusions must be weighed with the judgement gained from the qualified experience of the interpreter who can check a quantitative deduction with a qualitative impression. Validity of any conclusion will depend upon the imponderables involved when factual figures in some instances depend upon

opinions. Absolute truths as life and death, presence or absence, and gender of sex are of course obvious. Intelligence which acknowledges the relativity of less positive recordings will enhance the value of this work and avoid the skeptic's accusation that one can prove anything from statistics.

The following discussion is based on State owned mental hospitals:

It is generally felt that increasing numbers of the old age group are being admitted in recent years and that this probably accounts for our increase in rate of death. The tables do show correlation and confirmation. The fact that many County and City institutions were taken over by the State since 1941 only "accentuates the positive" in our present deep concern over solving the disposition of border-line geriatric mental problems.

Age groups of first admissions reveal the following percentages of patients over 60 years:

1929 - 21%; 1940 - 23%; 1941 - 26%; 1942 - 29%; 1943 - 32%; and 1944 - 32%

The average census for each fiscal year divided by the number of recorded deaths for the separate years give the following rates:

1929 - 6.4%; 1940 - 6.8%; 1941 - 6.6%; 1942 - 7.5%; 1943 - 8.9%; and 1944 - 9.4%

In evaluating the practically static census and the progressive decrease of first admissions for the past few years, it must be pointed out that Departmental rulings have made an effort to alleviate the desperate overcrowding of our institutions and to strike some possible balance with the war-time depletion of personnel. Admissions have been restricted as far as practicable to urgent, acute mental cases at the expense of accommodations for the purely custodial, voluntary, and habit act cases.

A continued encouraging sign is the slight tendency for the parole rate

to increase. Paroles in relation to the total census at the end of each year show:

1939 - 10.5%; 1940 - 11.4%; 1941 - 12.4%; 1942 - 12.4%; 1943 - 12.3%; 1944 - 12.5%

Among the first admissions the percentage of seniles and cerebral arteriosclerosis remain high, and paretics etill are decreasing, while the major functional psychoses are essentially unchanged. The non-psychotic admissions remain an insoluble minority and seem to be an unavoidable fraction of institutional caees of at least as long as other appropriate facilities, especially mental defective institutions, are limited. In the following table DP indicates Dementia Praecox, MD, Manic Depressive, SME, Syphilitic Meningo-encephalitie, SEN, Senile, CART, Cerebral arteriosclerosis, and NON, Non-psychotic.

	<u>1939</u> %	<u>1940</u> %	<u>1941</u> %	<u>1942</u> %	<u>1943</u> %	<u>1944</u> %
DP	23.0	25.0	24.3	24.3	24.0	23.4
MD	9.5	8.8	7.2	9.6	8.3	9.1
SME	10.0	9.8	9.6	8.8	8.8	7.9
SEN	8.7	9.4	9.9	12.4	14.6	14.1
CART	7.8	7.6	10.5	11.1	11.2	12.8
NON	8.2	6.8	8.3	6.9	7.0	7.5

Taking the present tables by themselves certain impressions of previous years are unchanged.

1. Dementia Praecox leads by far in comprising the bulk of the permanent population of institutions. Computed on ten or more years residence, the population at present consists of Dementia Praecox, 46.4%, Manic Depressive 11.1%, and Mental Defectives (including non-psychotic) 9.9%.

2. Most seniles and cerebral arteriosclerotics pass away in the first few months following admission and among the surviving seniles the expectancy is two to three years.

3. Dementia Praecox has the longest survival of hospitalization with twenty or more years expectancy.

4. Pulmonary tuberculosis is the fourth leading cause of death accounting for 10% of all deaths and there has been no improvement in the last few years.

Although the census of the mental defective and epileptic institutions is practically static 540 first admissions were accomodated. The waiting lists demand at least five times this number giving a frank indication to the extreme pressures exerted on the several Superintendents for admission.

The report of the Governor's Committee which completed a survey of the State mental institutions by July, 1944, gives a far better description of the situation than we can attempt here, and should be consulted along with these statistics. Immediate and post-war recommendations are extensively given and will serve to blue print the Department's future program.

A special citation is due the faithful nucleus of key officers and employes who remain with us notwithstanding more attractive situations elsewhere. No small credit must be acknowledged to the Civilian Public Service Units who on a voluntary basis have elected to serve the mental institutions. The State-wide depletion of personnel from the accumulative impact of war emergencies leaves the mental institutions struggling to function with 60% of their physicians, 47% of their registered nurses and 56% of their attendants. Efforts approach the miraculous when with this shortage the average overcrowding is 23% with the large

institutions taking the brunt, one of them supersaturated as high as 75%.

Although abnormal conditions must be expected during a total war and every type of facility must be called upon to share the burden, it may be hoped that the impetus initiated by this war of wars will so sensitize the public consciousness to the plight and economics of mental illness that wide-spread sympathetic recognition and support will aid our future endeavors.

COMMONWEALTH OF PENNSYLVANIA

TENTH  
ANNUAL STATISTICAL  
REPORT

*of the*

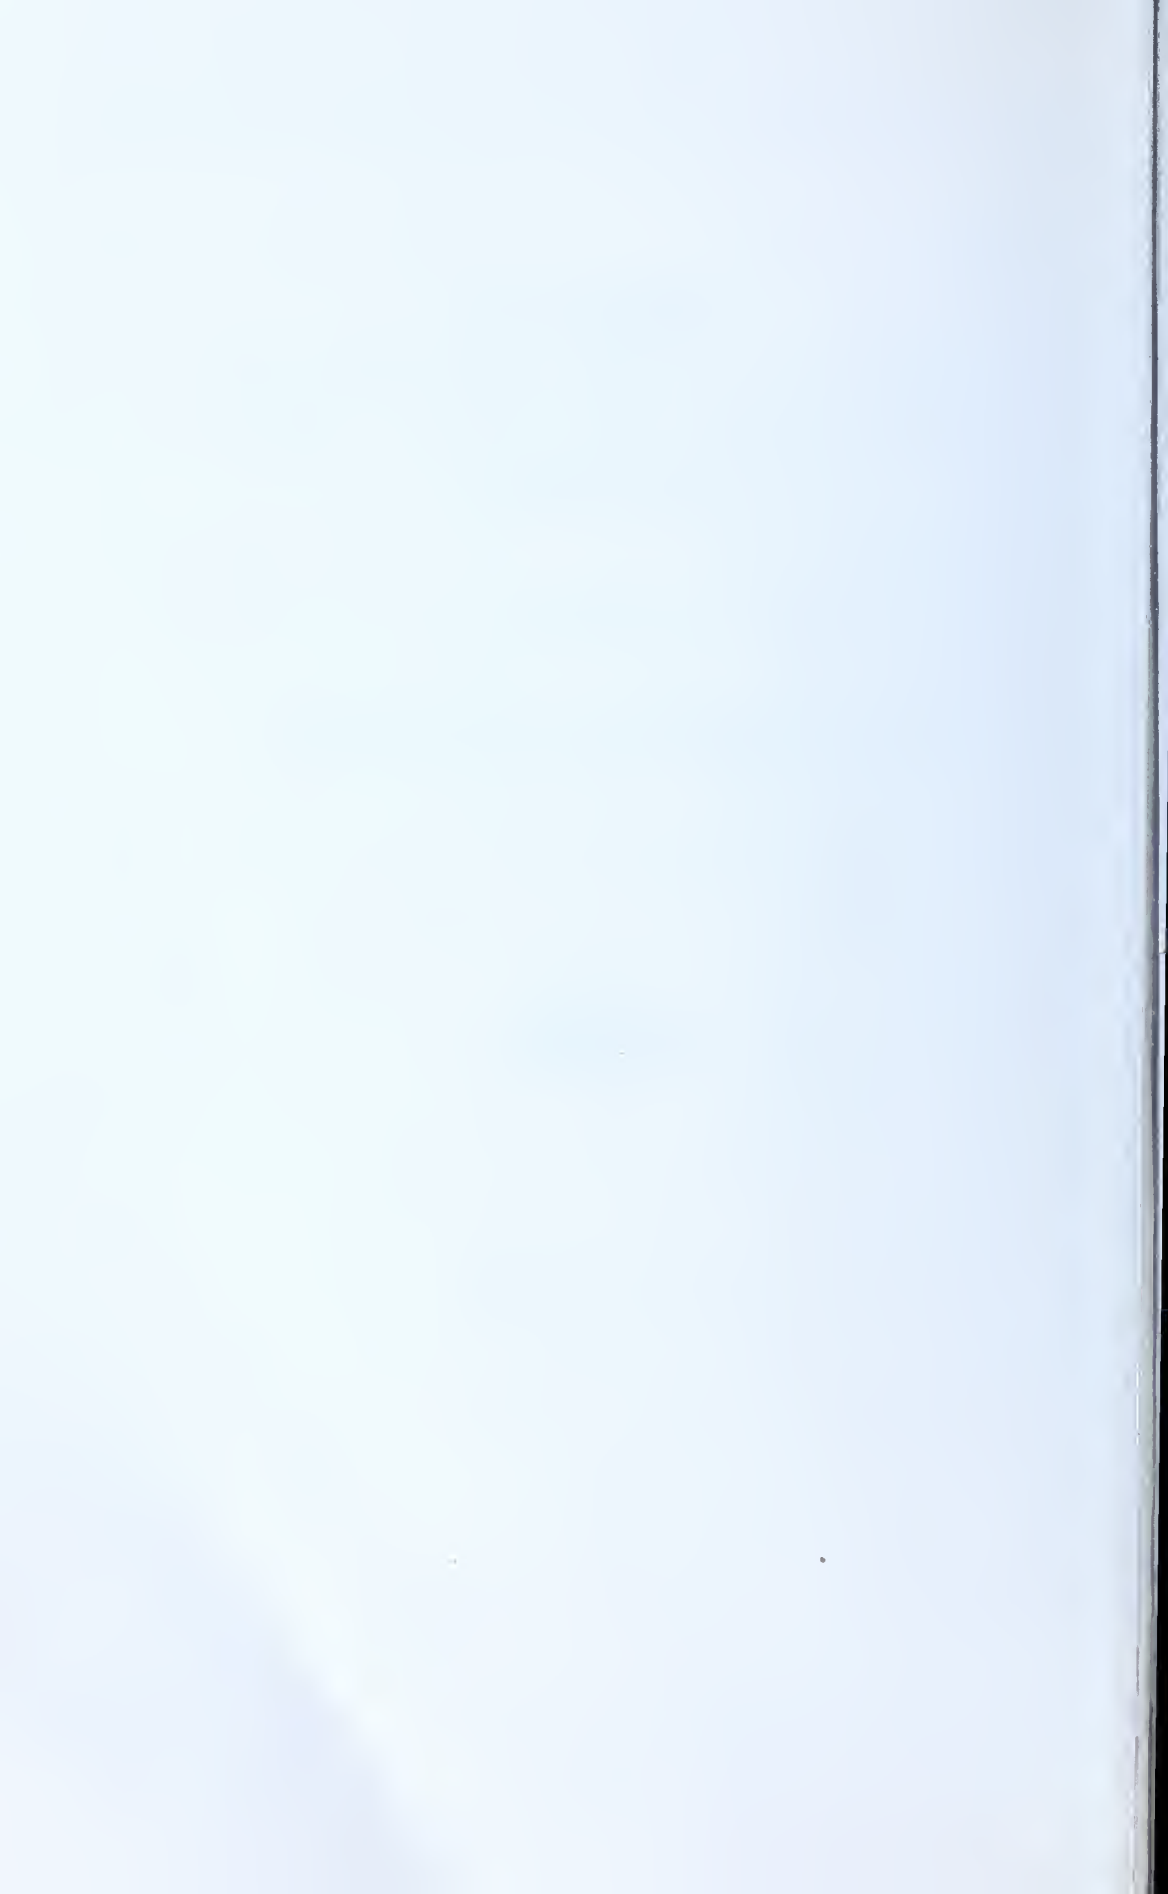

Department of Welfare

S. M. R. O'HARA

*Secretary*

1944

The tables and statistics presented in this and preceeding issues of Section B, compiled by the Department of Welfare contain important information concerning the problem of crime and individuals incarcerated in the State and County institutions of Pennsylvania.

These statistics are used for analyzing current issues and projecting plans for the improvement of the State Penal Program in Pennsylvania.

In April 1944, the Honorable Edward Martin, Governor of Pennsylvania, appointed a committee to make a complete study and survey of the existing correctional system of the Commonwealth and to make recommendations for its reorganization. The membership of this committee was as follows:

Stanley P. Ashe, Chairman, Warden of Western State Penitentiary  
Henry C. Hill, Chairman of the Pennsylvania Board of Parole  
William S. Livengood, Jr., Secretary of Internal Affairs of the Commonwealth  
Herbert Smith, Warden of Eastern State Penitentiary  
Robert E. Woodside, Judge of the Court of Common Pleas of Dauphin County

Governor Martin frankly stated when he appointed this committee that he was interested in the creation of a program which would place Pennsylvania in a position of leadership in the treatment of crime and delinquency. This committee visited all State institutions and analyzed all available statistics and reports concerning the problems of crime and institutional facilities. Their formal report was presented through the Department of Welfare to the Governor on July 1, 1944.

The recommendations of the committee were also embodied in the report submitted by the Department of Welfare to the Post War Planning Commission.

The 1945 session of the General Assembly appropriated \$19,985,000 for the execution of this program in coordination with a similar program for the mentally ill and criminally insane of the Commonwealth.

Governor Martin's interest and leadership in improving the penal system will result in constructive changes which will have lasting effects.

In this report it will be noted that 48.9% of the commitments to the State Penal and Industrial Schools were under 21 years of age. This continual trend of young offenders places upon the Department of Welfare a great responsibility in making sure that every instrument of rehabilitation and treatment will be used in order to salvage a maximum number of these youths. This implies a diversity in the type of institution, opportunities for intense study so that individualized programs can be prepared to fit the maximum need of the offender, employment opportunities so that work habits can be learned, and above all a personnel with training and experience essential to the position.

All steps and procedures contemplated for the future will be taken after thorough study has been made of the problem. Past experience will be reviewed and advice of those interested in the field will be solicited in order to provide for Pennsylvania an outstanding program for caring for offenders.

Department of Welfare  
S. M. R. O'Hara  
Secretary

Yearly a series of statistical reports are issued by the Department of Welfare. This report which is Section B, includes the data collected and compiled by the Division of Research and Statistics concerning institutional population and commitments. Other pertinent figures dealing with such problems as prison labor, types of individuals committed, and costs are a part of this report.

The State institutions included in this report are the Penitentiaries and Industrial Schools operated by the Department of Welfare. In previous years, tables have been included which list the figures in correctional or training schools. Starting with the year ending May 31, 1944 these tables and statistics will appear in Section C.

It is important to note when studying the tables concerning county prisons that the analyzation of first commitments is limited to 34 of the county prisons. In this state there are 70 county prisons, including the Allegheny County Workhouse and the Philadelphia House of Correction. Statistics of 36 of the county prisons do not appear in this report.

The work of compiling and tabulating the data for this report was done by the members of the Division of Research and Statistics staff under the supervision of Mrs. Gertrude H. Thompson.

Director

## BUREAU OF CORRECTIONS

The Bureau of Corrections represents the Department of Welfare and is responsible for the inspecting, supervising and regulating of all institutions in the penal group. This Bureau, through the cooperation of the Division of Research and Statistics, herewith submits information and statistics compiled from data received from the State and County Penal Institutions.

The Bureau is governed by Laws and Acts of Legislature, the Administrative Code, and standards prescribed by the Secretary of Welfare covering the physical maintenance and administrative policies in the institutions. The primary duty of the Bureau is to inspect, supervise and regulate the prisons, and investigate all unusual occurrences in all institutions within the jurisdiction of the Department of Welfare to insure just, humane care and considerate treatment of all persons confined therein.

The Commonwealth has progressed far in its penal program and the original idea of punishment and solitary confinement for inmates has changed so vastly that now the inmates are accepted at the institution with the definite idea of rehabilitating them for eventual return to society.

It is the aim of each institution to employ capable and well-advised persons who would be able to cope with any and all situations and all types of offenders. During this war period it has been very difficult to maintain the standard of personnel as many of the employees are serving in the different branches of the Armed Forces.

The Classification Board determines the type of confinement best suited to the individual; the training for which he is adapted; the educational and vocational training necessary to equip him for the future; the medical and surgical services he may require; and the psychological and

psychiatric treatment when necessary. The spiritual need for those incarcerated is administrated by the Chaplains in a well organized program. Balanced diets, proper housing, exercise, hobbies, libraries, recreation, entertainment and suitable work is afforded the offenders. Many have an opportunity to maintain some semblance of dependency and self-sufficiency, and instilling a sense of responsibility to themselves and society. The inmate has the privilege of requesting private interviews and consultations with members of the Bureau of Corrections who gives him the advice and assistance in his problems as an unbiased third party. All these efforts toward individualization are employed to enable the offender to "do his time" in a manner that will rehabilitate him and insure his safe return to society and reclaim him from further criminal tendencies.

In April, 1944, the Governor appointed a Commission composed of men who have had practical experience in dealing with criminals, to survey the existing penal and correctional institutions of this Commonwealth, to make recommendations for the reorganization of the penal institutions, to provide for Pennsylvania the highest standards and treatment of crime and delinquency. This Commission performed the task in an able manner, and the recommendations would if incorporated, improve the penal and correctional program to such an extent that it would bring Pennsylvania once again to the position of leadership in the penal programs of the United States.

Because of the anticipated increase in crime and delinquency which will, no doubt, be rampant throughout the country after the cessation of hostilities, and due to the inability of many persons to properly adjust to normal conditions, it will be advisable to abandon some of the more antiquated prisons and erect more suitable buildings. Additional institutional facilities are necessary to adequately segregate offenders according to age, sex, criminal record and nature of crime. It is also necessary to have in-

stitutions with different degrees of custody so that the first offender will have a maximum opportunity of rehabilitation and will not be associated with the hardened criminal. Fine prison structures with high walls guarantee neither rehabilitation or custody. A well defined program administered by competent and experienced personnel is most important. The size of Pennsylvania and the addition of new State Institutions will place a greater responsibility upon the Bureau of Corrections in maintaining an efficient program.

The charts and graphs appearing in this report present much information dealing with the crime, the offender, the institution and the criminal justice program. Space does not permit a detailed explanation of all the important material available, but a few major comparisons follow:

New commitments to the State Penal and Correctional Institutions for the period ended May 31, 1944 were 1825. This represents a reduction of 153 over the previous year. This slight reduction in commitments, in part, has been due to Defense and War programs, inductions and enlistments in the Armed Services, and the high rate of employment has eliminated much idleness and has prevented many individuals from committing crime.

Discharges from the State Penal and Correctional Institutions were 3012 for the year ended May 31, 1943, as against 2424 for the year ended May 31, 1944. Although there were fewer admissions during the year ended May 31, 1944, the fact that fewer paroles were granted during this period caused little change in the population when compared with that of the previous year.

Robbery, Burglary, Aggravated Assault and Sex Offenses predominate over all other crimes in spite of the exceptional economic and financial opportunities.

Of the 1825 committed, 893 were 21 years of age. This percentage of youthful lawbreakers has existed for sometime previous to the entry of the

United States into war and regardless of the all time high employment possibilities.

All but 373 of the total commitments during the period ended May 31, 1944 were of American born parents.

Court commitments to 34 County Prisons reporting for the period ended May 31, 1944, were 3597; as against 3999 committed to the same 34 County Prisons reporting for the period ended May 31, 1943.

Court commitments to 34 County Prisons reporting for the period ended May 31, 1944 were 3129 males and 469 females; as against 3413 males and 586 females for the same 34 County Prisons reporting for the period ended May 31, 1943.

2785 of the total number committed by courts during the year ended May 31, 1944, were first offenders.

Disposition of defendants of major offenses is interesting in view of the large number of inmates incarcerated in the institutions. 27.7 were granted probation and given suspended sentence which indicated the local judges are unwilling to give prison sentences in cases where the offender can return to society and overcome his tendency toward crime. 12% of the cases were settled by costs and fines, which step toward restitution often keeps the offender from becoming a recidivist in crime.

The institutions inspected and supervised by the Bureau of Corrections are as follows:

Eastern State Penitentiary, Philadelphia; New Eastern State Penitentiary, Graterford; Western State Penitentiary, Pittsburgh; New Western State Penitentiary, Bellefonte; State Industrial Home for Women, Muncy; Pennsylvania Industrial School, Huntingdon, (since established as the Pennsylvania Institution for Defective Delinquents); Pennsylvania Industrial School, Camp Hill; Allegheny County Work House, Blawnox; House of Correction,

Philadelphia; 68 County Prisons and 500 City, Borough and Township Lockups.

For the year ended May 31, 1944, the Bureau of Corrections instituted 289 transfers of inmates from one institution to another. The transfer of prisoners is occasioned for various reasons: first, there is the inmate who is unable to adjust; secondly, the health or mentality of an inmate may occasion a move, or he may require a lesser degree of custody for rehabilitation; and lastly, the majority of transfers are required where inmates are employed in farm and food production.

This Bureau in cooperation with the Selective Service Board established special panels within the Institutions for the selection, examination and fitness of inmates for service in the Armed Forces. Many inmates were paroled or given commutation of sentence and duly inducted into service.

In the majority of cases the inmates have proven their patriotism and devotion to their country. In an all out effort for production of food and farm products, many of the men in the prisons were transferred to a prison where farming, dairy and good production required their services. Due to their efforts maximum results were obtained. The inmates who required greater security were employed in the prison on war contracts, and they too have handled the job well. The American Red Cross Blood Donor Service is a most familiar institution to the average inmate who donated blood for plasma. Thousands of dollars were invested in War Bonds by the inmates during the different War Loan Drives.

The main object of this summation of material and comparison of charts and tables is to impress, in part, upon the reader that every effort toward individualized treatment of the inmate is in its productive stage, and that the results have proven the worth of advanced penological views in the care, treatment and custody of the persons confined in any of Pennsylvania's

Penal Institutions.

We have endeavored to bring to your attention the most significant comparisons in the statistics herein presented; however, it has not been our intention to have covered all the material and many more interesting comparisons can be made.

COMMONWEALTH OF PENNSYLVANIA

TENTH  
ANNUAL STATISTICAL  
REPORT

*of the*

Department of Welfare

S. M. R. O'HARA

*Secretary*

1944

Bulletin No. 87

General

Section C

The statistical report of the Department of Welfare is issued yearly in three separate bulletins. Section C of the Tenth Annual Statistical Report presents, in summary form, data assembled through the Bureau of Institutional Management and Community Work. Statistics on the mentally ill are reported in Section A, and statistics on the Penal Institutions; including the Industrial Schools, are reported in Section B.

The Bureau of Institutional Management has on its staff specialists in the different fields of institutional administration. Services of this Bureau are rendered to all institutions supervised by the Department of Welfare. The major responsibility is the supervision of the different operating functions in the State-owned mental, penal, and medical and surgical institutions. The Bureau also acts in an advisory capacity for State-aided and State-supervised institutions.

The Bureau of Community Work represents primarily the preventive efforts of the Department of Welfare. This Bureau is charged with the responsibility of seeing that adequate care is given to young, aged, and visually handicapped citizens of our Commonwealth who need assistance from resources other than that supplied by themselves or their own families. This does not include direct relief which is administered by the Department of Public Assistance.

The Bureau of Community Work is also responsible for the administration of laws which affect charitable, eleemosynary institutions and agencies. The supervision of the 171 State-Aided hospitals is also conducted by this Bureau.

Throughout the statistics presented in this section the influence of the war period is evident. Specific comments on this subject will be found in the individual statements prepared by the two Bureaus.

Department of Welfare  
S. M. R. O'Hara  
Secretary

The data which appears in this Section is listed under two divisions. The first division was assembled through the Bureau of Institutional Management and the second through the Bureau of Community Work.

Tables involving Institutional Management state facts concerning administrative functions in all State-owned institutions. The items included are; personnel, laundry, agricultural and operating activities. Services rendered in State-owned hospitals also appear. In a number of these tables the relationship of the function to patient or inmate population is shown. Other tables give the relation of function to quantity and cost.

In the section prepared by the Bureau of Community Work appear tables giving the location, age, race, and other factors concerning children who require care. There are also tables concerning the individuals who are housed in County Homes.

Correctional schools are listed in this section for the first time. Previously they have appeared in Section B under "Penal and Correctional Institutions".

Numerous tables concerning the activities of the Council for the Blind have been added to this report.

Major credit for the compilation and tabulation of the statistics in this section is given to Mrs. Gertrude H. Thompson, Supervisor, and the members of the staff of the Division of Research and Statistics who prepared this report.

## BUREAU OF INSTITUTIONAL MANAGEMENT

The Bureau of Institutional Management is responsible to the Commonwealth and thirty-seven State-owned institutions for developing and supervising a program providing food, clothing, laundry, light, water, heat, farm products and general maintenance. Standards for goals of performance are promoted. Key employees are called together for conferences on important problems. Monthly summaries of data reflecting efficiency of the food, laundry, hospital, farm and engineering service records are issued to institutions.

### Dietary

Tables I and III show the basic ration and the daily per capita food consumption which has been estimated for the different types of institutions for a period of one year. This ration has been based on the essentials of a low cost adequate diet. It is used as a yardstick in judging the adequacy of the institutional food consumption. It is also used as a guide in planning the production of the institutional farms and in the purchase of perishable foods to supplement such production, as well as in the purchase of staple foodstuffs.

The variation as to the performance of the different institutions is attributed to factors such as weather and soil conditions; physical conditions within the institutions such as canning, storage and preparation facilities, and number of personnel as well as psychological and budgetary factors. Quality, variety and economy are stressed and every attempt is made to insure adequate food consumption and satisfaction for both patients and personnel. The waste figure denotes plate waste and not preparation waste.

During 1943 - 1944 the total foods consumption has continued to

slowly decrease. The average consumption is now about 8 ozs. less than the total amount set up in the basic ration. At no time has the shortage been too alarming, but it has taxed the ingenuity of purchasing agents and dietitians. The policy of enriching the bread made in institutional bakeries has been encouraged as a public health measure in the prevention of borderline dietary deficiencies. About 12% or 15% of the total average daily food consumption consists of flour in the form of bread, therefore, the nutrients supplied by this one food holds a very important place in the diet.

Food costs have continued to rise slowly despite ceiling prices and reduced food consumption. Salary costs have increased even though many vacancies have existed. The ratio of dietary personnel is based on positions set up, not on positions actually filled. The desirable ratio of one dietitian to every 750 people fed and one dietary employee to every 60 people fed should be achieved, but it will be necessary to set up additional positions in certain institutions. The degree to which the dietary function is centralized, depends largely upon the physical set up of the institutions. It also controls to some extent the number of dietary employees. In some institutions there is more over-lapping of departments in the responsibility of the dietary service than others, this also results in a lower ratio which is shown in these tables.

Table II indicates the trend in prices of certain type foods for a period of five years. The figures given were obtained from the prices submitted from thirteen institutions including mental hospitals, schools for mental defectives, and penal and correctional institutions.

#### Farms

Institutional farms are maintained in connection with twenty-six institutions. A total of more than 33,000 acres is included in these farms, about 15,800 acres of which are tilled. The returns to the institutions

include, in order of importance, protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from budgets available.

Table VI shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the policy that the following products, in order, should be produced as needed to the extent that land and other facilities are available: vegetables, potatoes, crops to support dairy, piggery, hennery and other livestock. Land not suitable for tilled crops is planned and maintained for use as pastures or woodlots.

Employment of patients or inmates is also shown. A total of 2141 inmates or patients are employed regularly in farm activities, with the larger proportion working with general farm crops and in gardens. This number is greatly increased at times during the Summer and Fall seasons when vegetables, potatoes or fruits are being harvested. The varied opportunity thus presented to the medical staff at the several institutions in placing mental patients is considered of great value. A comparable value toward rehabilitation is obtained at the penal and correctional institutions. At Rockview alone, upwards of 570 prisoners are employed regularly in farm activities.

Table VII shows the milk production per cow, egg production per hen, and the crop index for 1929 as compared with 1944. It will be noted that the efficiency of production per cow is 12% higher in 1944 than in 1929. Production for 1944 is somewhat lower than for 1933 or the past decade, due to war time conditions, particularly those resulting in a high turnover of farm employees and scarcity of proper feeds.

Egg production in 1944 shows a 49% increase over that of 1929.

The crop index figure as indicated reflects a comparison between

institutional yields of farm crops and the average yields of the farm crops in the counties in which the several institutions are located. It is gratifying to note that from 1929 to 1944 the trend of institutional crop yields has been upward. From 12% above the average in 1929 to 50% in 1944.

Table IV shows the number of paid employees in farm activities at the several institutions.

#### Laundry

Table IV records, by institutions, average population, pounds soiled goods, employees paid and others, washing costs and gross costs per pound of soiled goods. The population at institutions receiving laundry service, 54,832, is the highest recorded for any year. This is due to the added mental hospitals, transferred from county institution districts.

The total poundage of soiled goods, 46,866,919 pounds, is also the highest ever recorded. The poundage per capita, 855 is slightly less than the 891 pounds recorded per capita for the year 1941. Most of the latter year represented pre-war conditions. The greatest difference was in the mental hospitals where the average for 1941 was 919 pounds as compared with 871 pounds for 1944. The lower load for 1944 undoubtedly reflects a shortage in clothes and linens. The number of employees, paid and others, is approximately the same for each of the two years.

Washing costs likewise are approximately the same but the gross cost per pound for 1944 is .0072 as compared with .0098 for 1941. The lower gross cost reflects the economy of a considerable quantity of new equipment and perhaps also the inability during 1944 to secure needed replacements and repairs.

A comparison of the thirty-fifth test bundle with the average of the first five test bundles, the latter run up to late in 1936, indicates a marked improvement in efficiency in institutional laundries. This increase

of efficiency is evident in all three bases of appraisal, breaking strength loss, whiteness retention, and soil removal. Soil removal shows the greatest improvement.

As compared with 1941, however, the percentage of breaking strength loss is higher in 1944. Factors contributing to this condition are less choice in the selection of washroom supplies, the addition of certain new institutions that have not yet, on the whole, approached the average efficiency of the older institutions, and the large replacement in laundry managers and other help.

There is some loss in whiteness retention in 1944 as compared with 1941 which is attributed to the same causes as the decrease in breaking strength efficiency. The same applies to soil removal in which there is a loss of 6% as compared with 1941.

#### Engineering

The engineering activities cover the various utilities used in conjunction with the operation of the institutions and the maintenance problems that affect the continuity of each of the utilities together with the care of the physical property. Table IX covers the annual costs for the purchase of the basic maintenance materials and utilities. The purchase of coal is the largest single item. Coal cost for the year was almost 40% greater than for the year ending May 31, 1942, the increase being principally due to the delivered cost of coal per ton.

The purchase of electricity represents approximately 50% of the current that is actually used at the State institutions. The total electricity purchased was about  $\frac{1}{2}$  million less KWH than for 1942. This decrease is considered as due largely to greater economies of administration and somewhat to black-out regulations during the war period. The total expenditures for plant and maintenance operations is larger than for 1942, due to added

cost of fuel, supplies and increased salaries. The increase is \$867,000, which includes \$225,000 for the institutions at Hollidaysburg and Woodville respectively, which were not a part of the 1942 tabulation. The added cost over two years ago, therefore, is approximately 27%.

#### Hospital Service

Analysis of Hospital Service at State-owned Medical and Surgical Hospitals is shown in the following tables:

<u>X</u>	Patients, Type of Service and Number
<u>XI</u>	Laboratory Analysis and X-Ray Examination, Type and Number
<u>XII</u>	Clinic, Type and Attendance

The total number of patients admitted, 33,124 compared with data for 1943 reveals a slight decrease in the number of admissions to these hospitals.

Table XI shows the amount of laboratory work done, with a total of 312,772 examinations, or 9.4 tests per patient admitted. This is an increase over the previous year when the tests performed were 287,100, or 8.6 tests per patient admitted. A total of 31,074 X-Ray examinations were reported this year, which is a slight decrease from last year's report.

The attendance at the hospital clinics, Table XII, has greatly increased, with a total of 62,378 visits, or 22,096 more than were reported a year ago.

#### Nursing Education

In Table XIII will be found the number of students who have completed the three year course in nursing conducted at four general hospitals and one mental hospital. No students were enrolled in the nursing school of Danville State Hospital this year; however, April 1, 1944, this Hospital established a thirteen week affiliate program in psychiatric nursing, representing five hospital schools of nursing. A similar course has been established at the Norristown State Hospital, January 1, 1944, with six

schools of nursing affiliating. Beginning this year, the schools of nursing of the Ashland, Hazleton, and Scranton State Hospitals have included in their curriculum affiliation in psychiatric nursing. The demand for psychiatric nursing affiliation continues to increase. As will be noted in Table XIII 209 more students received this training and experience this year than last year.

The Scranton, Philipsburg, and Ashland State Hospitals participated in the provisions of the Bolton Act. A feature developed from the U.S. Cadet Nurse Corps program accelerates the training period and makes available Senior Cadet Nurses for the last six months of the three year training course. With emphasis on psychiatric nursing training, stressed by the Military and also the mental hospitals, a Senior Cadet program in psychiatric nursing has been established at eight State-owned mental hospitals, Allentown, Wernersville, Warren, Harrisburg, Philadelphia, Torrance, Mayview and Western State Psychiatric Hospital, Pittsburgh. Under this program, three Senior Cadets were enrolled at the Allentown State Hospital beginning March 1944. The other seven mental hospitals have been completing preparations for this program and making contacts with nursing schools throughout Pennsylvania concerning it.

#### Course for Attendants

Table XIII shows the number of attendants having completed training at the Harrisburg State Hospital, which course is approved by the Department of Public Instruction. The twentieth Graduation Anniversary of the School was observed December 25, 1943. On that date in 1923, ten graduates are recorded.

#### Maternity and Infant Care for Wives and Infants of Men in Armed Forces

Maternity and infant care for wives and infants of men in the armed forces as provided through Federal regulations and funds, is available at all

of the medical and surgical hospitals.

Nursing Service

Nursing service in the mental hospitals suffered greatly due to the rapidly increased number of vacancies in nursing and attendant positions. The percentage of vacancies in the positions mentioned exceeded 50% in some cases. Another factor closely related was the difficulty and at times the impossibility of securing supplies such as soap, bed linen, and patients' clothing.

## BUREAU OF COMMUNITY WORK

The Bureau of Community Work functions through two Divisions whose fields of activity are in brief as follows:

Division of Family and Child Welfare  
Child Welfare

This Division is responsible for visitation and supervision of over 400 child-caring organizations throughout the State. Such organizations include private child placing agencies, child care programs of County Institution Districts, Juvenile Courts, institutions for dependent and neglected, delinquent, and physically handicapped children. Homes for unmarried mothers, day nurseries and day care centers are also included.

Everyone knows that providing a satisfying life experience for a dependent, neglected or delinquent child, or failure to do so, is a deciding factor in determining whether that child develops into a happy contributing citizen, or finds his way into a correctional institution or an institution for mental patients with a resulting cost to the tax payer. Through its supervisory function this Division operates in the field of prevention.

The Division also administers the Act regulating the importation of children into the Commonwealth from other states and the Act which requires that any person who receives for care more than one child under 3 years of age must secure a license from the Department of Welfare. During 1944 one member of the staff of the Rural Child Welfare Unit, loaned to the Division, visited all persons reported to be caring for children. This visitation has a threefold purpose. It is in line with the authority given to the Department under the Administrative Code to supervise all individuals caring for children. It represents an endeavor to acquaint persons receiving children for care with the requirements of the Infant Boarding Home Act. It forms a part of the Department's program of

prevention and child protection through efforts to insure adequate standard of home care for children receiving boarding care away from their own homes.

It will be noted that as of December 1, 1943, 39,604 children were receiving care from private and public agencies in Pennsylvania. Of this number 8,177 were under the supervision of child caring agencies. In institutions for dependent children there were 11,287 and in institutions caring for delinquent children there were 12,576.

#### County Homes and Homes for the Aged.

In addition to its responsibilities for children the Division supervises County Homes and 14 State-aided Homes for the Aged.

On December 31, 1943, 11,185 individuals were housed in the County Homes. Of this group, 7,713 were men, and 3,472 were women.

#### The Rural Child Welfare Unit

This unit administers funds allocated to the Department of Welfare by the United States Children's Bureau under the Social Security Act for the purpose of "establishing, extending, and strengthening, especially in predominantly rural areas, public welfare services for the protection and care of homeless dependent, and neglected children, and children in danger of becoming delinquent". Funds are used for payment of a part of the salaries of qualified workers employed by County Commissioners, in the care of children for whom the Commissioners are responsible; salaries of the State Supervisory Staff, and partial support of the Tri-County Child Guidance Center.

Fourteen counties are benefiting from this fund under plans agreed upon between the County Commissioners of each County and the Secretary of Welfare.

The Child Guidance Center, located in Harrisburg, is supported partly from funds administered by the Rural Child Welfare Unit and partly from local funds. It provides psychiatric, psychological, diagnostic or consultation service for children who are presenting behavior symptoms or some form of maladjust-

ment. It was established in 1937 as an experiment in providing a type of service usually available in urban centers only, for children of rural communities.

#### Division of Homes and Hospitals

This Division licenses and supervises nursing homes, maternity and private hospitals operating for profit. It also supervises private hospitals receiving State Aid.

The number of institutions supervised by this Division in the year 1944 were as follows: 172 State-aided Hospitals, 49 Hospitals operating under charters of the first class (only maternity department is inspected), 217 licensed Private Nursing Homes and Hospitals, 4 licensed Maternity Homes and Hospitals, and 6 institutions caring for crippled children. Aside from the routine inspection it is necessary for this Division to make many calls upon individuals who are attempting to qualify for a license. The increased number of aged requiring care has added to the supervisory responsibility of this Division.

#### Special Legislation

A portion of the Non-Profit Corporation Act requires the approval of the Department after investigation of need for the proposed service, before a Court of Common Pleas may grant a charter to a Non-Profit charitable organization.

The Solicitation Act provides that no organization unless exempted by statute may solicit funds for charitable purposes without first securing a certificate from the Department of Welfare.

These two Acts are administered by the Bureau of Community Work.

## THE STATE COUNCIL FOR THE BLIND

The State Council for the Blind functions as one service of the Department of Welfare. The Secretary of Welfare is the Executive Officer of the State Council for the Blind.

Originally the Council for the Blind acted as an educational and information unit. Later by legislation, additional responsibilities were added to the Council. Remedial Eye Care and Prevention of Blindness services were added for the purpose of reducing the number of people who might become blind later in life. Tables are included which exemplify the type of service rendered under the Remedial Eye Care Program.

Another service of the Council for the Blind is that of installing and supervising vending stands which are owned and operated by blind persons. In cases where the individual needs financial assistance a loan fund administered by the Council is available for that purpose.

Blindness restricts, to a large degree, the normal activities in which all people engage. In order to assist blind people in making their lives more profitable and enjoyable, the Council for the Blind inaugurated a Home Teaching Program. The majority of the Home Teachers are visually handicapped. They train people in methods of performing the normal requirements of living in an independent manner. They also are able to assist blind individuals in activities which result in gainful occupations.

The Federal talking book machines which play records and therefore permit added entertainment and education for the blind are distributed through the State Council for the Blind.

TABLE XIII

BUREAU OF COMMUNITY WORK  
RURAL CHILD WELFARE UNIT  
SERVICES GIVEN MARCH 1, 1943 TO FEBRUARY 28, 1944

Service	Number of Children
Consultation Only re:	92
Psychological Study Only	166
Diagnostic Study Only	39
Psychological Study Followed by Treatment	47
Diagnostic Study Followed by Treatment	5
Treatment Only	7
Total Children Served	356

Consultation is service given parents, agency workers and other adults in connection with problems of specific children but the children are not seen.

Diagnostic study includes a psychological study and psychiatric interviews.

Treatment is the service in which children and parents or substitute parents are seen weekly over a period of months for the purpose of helping the child to achieve a more satisfactory emotional adjustment.

TABLE XXIV

BUREAU OF COMMUNITY WORK  
RURAL CHILD WELFARE UNIT  
NUMBER OF INTERVIEWS FOR EACH SERVICE

Service	<u>Interviews With Children</u>		<u>Interviews With Adults</u>	Average Per Case
	Psychiatrist	Psychologist	Case Workers	
Treatment	398	171	500	18
Psychological		271	350	4
Diagnostic	65	41	140	6
Consultation			258	2
Total	463	483	1248	2194

Preliminary applications are interviewed by case workers and this increases the total number of interviews by those persons.

TABLE XIV

BUREAU OF COMMUNITY WORK  
RURAL CHILD WELFARE UNIT  
BASIS FOR CLOSING CASES

Services Completed	195
Parent Did Not Desire Further Service	45
Parent and Child Did Not Desire Further Service	13
Older Child Did Not Desire Further Service	3
External Change (such as moving, difficulty of transportation)	14
Parent Referred to Another Agency	2
Child Sent to Correctional Institution	1
Total	273

The basis for closing cases provides information as to outcome and result of service. Service is considered completed when the service requested has been given and completed satisfactorily in the estimation of the Center staff, the parent or agency worker and child.

CHILDREN UNDER CARE DECEMBER 31, 1938-1943
